BROLIS LW75MG vs LW75U

LW75U – aiming with day optics reticles

LW75MG – must be used without day optics and aiming with internal reticles

BROLIS

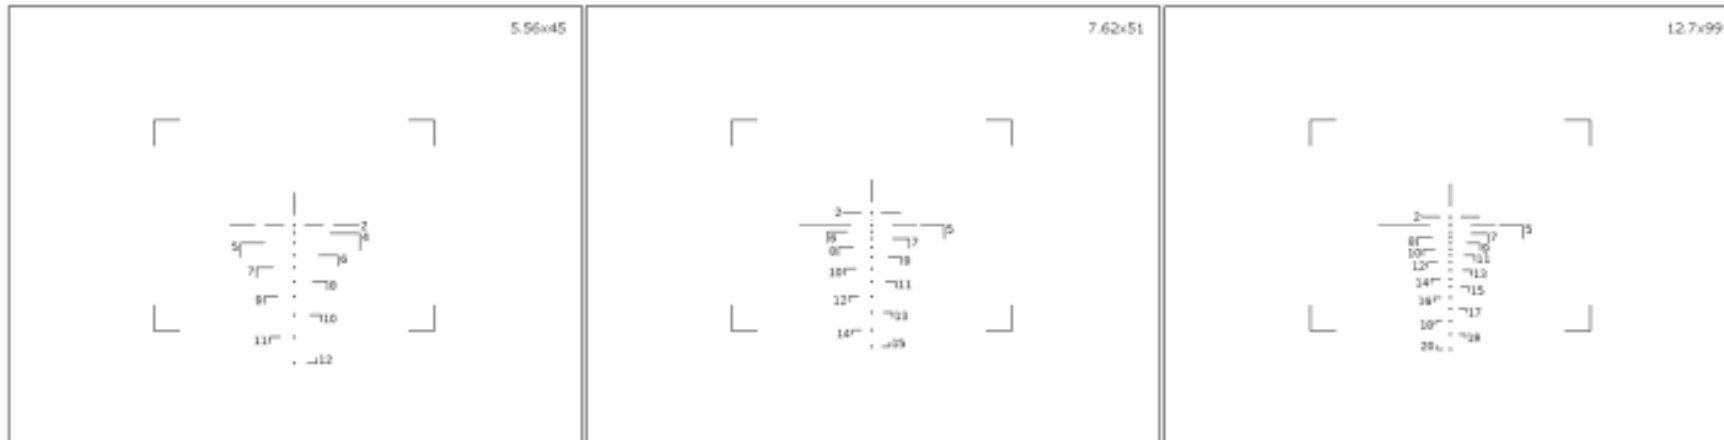

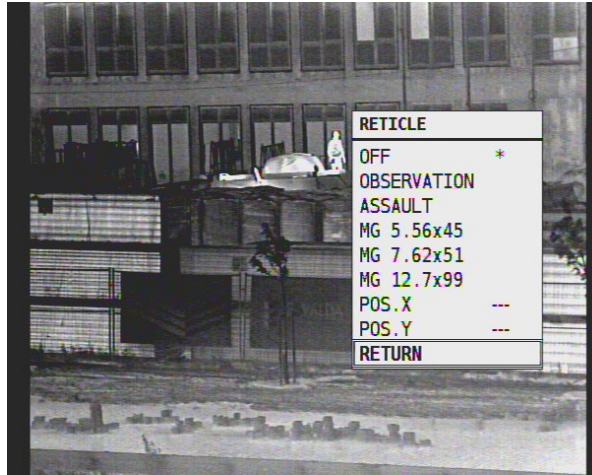

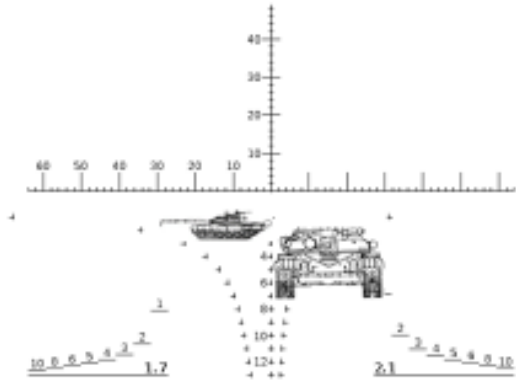

BROLIS LW75MG FEATURES

- Adapted for use as a standalone thermal imaging sight („stand-alone“)
- Has stadiometric and ballistic reticles for targeting without day optics
- Can be used as a handheld device for naked eye work („hand-held“)
- Effective aiming and working distance up to 1000 m („stand-alone“)
- Quick and efficient distance determination and shooting with the help of stadiometric and ballistic reticles
- Range measurement and shooting are available in all digital zoom windows X1, X2, X4.
